Massage therapy is the hands-on manipulation of the soft tissue and joints of the body. The soft tissues include muscle, skin, tendons and associated ligaments. Massage is historically known for its diverse range of positive physical and physiological effects, which are primarily due to the therapist's hands & their effects on the body. The interaction with the hands physically stretches the muscles, ligaments

and tendons, encouraging blood circulation throughout the body and inhibiting muscular spasms. The therapeutic use of the iM01 massage chair benefits all areas of the body - in particular, the muscular, circulatory, immune and nervous systems. No wonder so many people find massage therapy helpful in so many ways!
